Abstracts

According to our (Global Info Research) latest study, the global GPS-Aided Inertial Navigation System market size was valued at US\$ 465 million in 2024 and is forecast to a readjusted size of USD 733 million by 2031 with a CAGR of 6.5% during review period.

The GPS-Aided Inertial Navigation System combines the advantages of GPS and INS systems, using the long-term stability and moderate accuracy of GPS to compensate for the shortcomings of INS errors that propagate or increase over time, and using the short-term high accuracy of INS to compensate for the shortcomings of GPS receivers such as increased errors when interfered or signal loss when blocked. This combined guidance mode can significantly improve the accuracy and reliability of the navigation system.
