Abstracts

Anti-Jamming protects GPS receivers from interference and intentional jamming. By the time the GPS signal reaches the Earth's surface is weak and is susceptible to being overcome by higher power Radio Frequency (RF) energy. Even a small jammer of about 10 Watts power can disrupt an unprotected C/A Code receiver for about 30 kilometres (line of sight). GPS Anti-Jamming uses power minimization to reduce the effect of interference and jamming so that the GPS receiver can continue to operate correctly.

Scope of the Report:

The anti-jamming market for GPS in APAC is expected to grow at the highest CAGR during the forecast period. The rising adoption of GPS technology in the defense and commercial sectors, with a focus on accuracy and secured navigation, is expected to fuel the growth of the anti-jamming market for GPS in this region during the forecast period. As a result, APAC also holds a significant share of the overall anti-jamming market for GPS.

The worldwide market for GPS Anti-Jamming System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
