## Abstracts

The global GPS and GNSS Passive Antenna market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

GPS and GNSS passive antenna is a device used to receive signals from global navigation satellite systems (GNSS), including GPS, GLONASS, Galileo, and BeiDou. It is designed to operate without the need for an external power source and utilizes passive methods to capture and amplify satellite signals. The antenna collects the incoming signals and transmits them to a receiver or other GNSS-enabled device for precise positioning, navigation, and timing applications.
