According to our (Global Info Research) latest study, the global GPU Server Rental Service market size was valued at US\$ 14150 million in 2025 and is forecast to a readjusted size of US\$ 39820 million by 2032 with a CAGR of 16.1% during review period.

GPU server rental services refer to the on-demand rental of computing resources equipped with high-performance graphics processing units (GPUs) through cloud platforms or data centers. This allows enterprises or individuals to support highly parallel computing tasks such as AI training and inference, deep learning, large-scale model computation, graphics rendering, and scientific computing, without the need to purchase and maintain expensive hardware. This service is typically provided by cloud vendors or professional computing power service providers, and achieves elastic resource scheduling and cost optimization through time-based billing, annual/monthly subscriptions, or spot instances.

GPU server rental services are currently experiencing rapid growth, driven by the explosive demand for computing power in fields such as generative AI, autonomous driving, life science computing, and industrial digital transformation. As the supply of GPU chips gradually expands and enterprises migrate from 'self-built computing power' to 'cloud-based computing power,' this market is upgrading from a traditional cloud computing sub-sector to a 'core entry point for computing power infrastructure.' In the future, it will exhibit trends of multi-cloudification, edge computing, and networked computing power. Simultaneously, with the rise of new models such as computing power trading markets and AI computing power leasing platforms, the overall industry possesses long-term high growth potential and strategic infrastructure attributes.
