Abstracts

Starch graft copolymer is a new kind of macromolecular material. It takes hydrophilic and semi-rigid starch macromolecule as the skeleton, generates free radicals by physical and chemical methods, and copolymerizes with vinyl monomers. By introducing different functional groups and adjusting the proportion of hydrophilic and lipophilic segments, it has both polysaccharide compounds, intermolecular forces and reactivity, It also has the stability of mechanical and biological effects of synthetic polymers and the ability to unfold linear structures.
