Abstracts

Crop protection is the subject of dealing with plant science and practice of managing plant diseases, weeds and other pests that damages crop and forestry which leads to decrease in crop production. Scope of the Report:

This report focuses on the Grain and Cereal Crop Protection in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The escalating global population contributes to the pressure to increase cereal production, which leads to a proliferation of pesticide usage. Grains and cereals are a major consumer of crop-based as well as non-crop-based pesticides, particularly herbicides, which are a rapidly developing category. For the past few years, The global agricultural industry has been witnessing significant changes in terms of advancements in crop protection, drip irrigation, soil management, farming techniques, and enhancement of crop yields by means of herbicides, pesticides, the GM technology, fungicides, and other advanced techniques. Farms extensively employed the crop rotation method in order to protect the crops and maintain the level of nutrients in the soil. Soil fertility, soil erosion, and crop yield are augmented via this technique. It also helps mitigate the problem of pest attack which often occurs in a field engaged in incessant farming of the same crop. However, crop protection chemicals have also been observed to have an adverse effect on the environment and human health. Additionally, the nutritional levels of soil are affected by excess use of these products which decrease its productivity prospects. In terms of type, the grain and cereal crop protection market is categorized into insecticides, herbicides, and fungicides, among which herbicides are the dominant segment. This trend is expected to continue over the forecast period, on account of the wide utilization of herbicides as a crop protection

chemical because of their low cost, as well as increased research and development investments in the field and the introduction of new herbicidal active ingredients.

The worldwide market for Grain and Cereal Crop Protection is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
