Abstracts

According to our (Global Info Research) latest study, the global Granulated Lime in Agriculture market size was valued at US\$ 383 million in 2025 and is forecast to a readjusted size of US\$ 480 million by 2032 with a CAGR of 3.3% during review period.

Granulated lime, also known as simply lime, is a soil amendment used extensively in agriculture to adjust and balance the pH level of soils. It is primarily composed of calcium carbonate (CaCO_3), though it can also contain magnesium carbonate (MgCO_3) and other materials, depending on its source. Soils tend to become acidic over time due to factors such as heavy use of certain fertilizers, rainfall, and plant decomposition. An acidic soil (with a pH below 7) can limit crop growth because many essential plant nutrients become less available in these conditions. Lime works by neutralizing soil acidity, thereby raising the pH level closer to neutral (pH 7), which is optimal for many crops. Granulated lime is specifically processed into small, granular particles, making it easier to spread evenly across fields compared to traditional powdered or chunky limestone products. This form improves handling efficiency and allows for better integration into the soil with reduced dust during application.

The agricultural granulated lime market is primarily driven by demand in soil improvement, crop fertilization, and animal feed, particularly in the areas of acidic soil neutralization and nutrient supply, which are becoming increasingly important.

Regionally, North America and Asia Pacific are the largest markets, with Asia Pacific experiencing the fastest growth, projected at a CAGR of 4.06%. Europe and the United States are the main producing regions, accounting for the majority of global production.

Product types primarily include quicklime granules (QLG) and hydrated lime granules (HLG), with QLG dominating due to its rapid reaction and efficient neutralization capabilities. In terms of application, soil improvement is the largest application area, followed by crop fertilization and animal feed.
