According to our (Global Info Research) latest study, the global Grape Vinegar market size was valued at US\$ 1394 million in 2025 and is forecast to a readjusted size of US\$ 1839 million by 2032 with a CAGR of 4.0% during review period.

Grape vinegar is a fruit vinegar product made from grapes or wine through alcoholic and acetic acid fermentation, belonging to the high-end category of vinegar.

Key characteristics: Contains 4-7% acetic acid and small amounts of malic acid and tartaric acid, retaining grape polyphenols and antioxidants.

Total acid content ≥60g/L (calculated as acetic acid), alcohol residue 0.2-0.3%.

It is divided into two main categories: wine vinegar (fermented from wine/lees) and grape vinegar (fermented directly from fresh grapes).

Grape vinegar contains grape polyphenols and dietary fiber, which can reduce the number of harmful bacteria in the intestines, promote the growth of beneficial bacteria, aid digestion, relieve fatigue, enhance physical strength, and help with beauty and improve skin pigmentation. Its polysaccharides and potassium ions can reduce acidity in the body, thereby improving metabolism. It should be noted that people with stomach problems should not drink concentrated grape vinegar directly.

There are two main methods of making grape vinegar:

1. Wine lees fermentation: using wine lees for acetic acid fermentation.

2. Fresh Fruit Direct Vinegar Making: Grape juice is concentrated and then aged in an open environment to promote oxidation. Homemade grape vinegar typically involves washing grapes, destemming, adding water or sugar, sealing for fermentation, filtering, and acidity testing. Fermentation requires a dark environment and a suitable temperature (approximately 20-25°C).

Grape vinegar can be used for seasoning, salads, desserts, marinating meats, or making sauces. Italian Balsamic vinegar is often paired with cheese or desserts and can also be diluted for drinking. Homemade grape vinegar can be added to honey or fruit juice for a delicious and healthy flavor.

Grape vinegar has a long history. Balsamico vinegar from Modena, Italy, dates back to the 11th century and was once a tribute for the coronation of Holy Roman Emperors. Traditional methods require multiple aging in wooden barrels, with the highest grade requiring over 25 years.

In 2025, global grape vinegar sales reached 154.68 million liters, with a production capacity of approximately 198 million liters. The average selling price was \$8.76 per liter, and the average gross profit margin was 38.5%.
