Abstracts

According to our (Global Info Research) latest study, the global Graph Database market size was valued at USD 620.9 million in 2023 and is forecast to a readjusted size of USD 1488.3 million by 2030 with a CAGR of 13.3% during review period.

In computing, a graph database (GDB) is a database that uses graph structures for semantic queries with nodes, edges and properties to represent and store data. A key concept of the system is the graph (or edge or relationship), which directly relates data items in the store. The relationships allow data in the store to be linked together directly, and in many cases retrieved with one operation.

The market in North America is expected to hold the largest market share. The APAC region is expected to provide significant growth opportunities to vendors in the market and to grow at the highest CAGR during the forecast period. APAC, being a manufacturing hub, is expected to adopt graph database solution and services widely to remain cost efficient and export high-quality goods to other countries.
