According to our (Global Info Research) latest study, the global Graphene Based Anti Corrosion Coating Additives market size was valued at US\$ 223 million in 2025 and is forecast to a readjusted size of US\$ 489 million by 2032 with a CAGR of 11.8% during review period.

Graphene based anti corrosion coating additives refer to a class of high-performance nano-additives that incorporate graphene and its derivatives as the core functional component into coating formulations through physical blending or chemical modification, thereby imparting or significantly enhancing the corrosion protection performance of coating systems. In 2025, global graphene based anti corrosion coating additives production reached approximately 5,411 ton, with an average global market price of around USD 40,000 per ton. A factory gross profit of USD 14,000 per ton with 35% gross margin. A single line full machine capacity production is around 15 ton per line per year. The upstream is dependent on mining and graphite processing, specialty chemicals and nanomaterial engineering. The downstream demand is concentrated in industrial, marine and oils and gas. Graphene nanoplatelet additives are incorporated into fusion-bonded epoxy coatings for buried pipelines to improve moisture impermeability and crack resistance. China and India leads due to large-scale, government-led infrastructure projects.
