According to our (Global Info Research) latest study, the global Graphene Electric Floor Heating market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Graphene is a two-dimensional material composed of carbon atoms. It has excellent electrical conductivity, thermal conductivity and mechanical strength and is widely used in various fields.

Graphene Electric Floor Heating is a system that uses graphene materials to achieve indoor floor heating. Graphene electric floor heating heats up quickly and evenly, reaching the preset temperature in just a few minutes. It saves more than 30% energy than traditional heating, has small heat loss and low operating costs. Meet the human body's requirements for temperature comfort and bottom-up heat conduction. The indoor temperature distribution is more even, and the temperature can be turned on, freely set and adjusted at any time through remote intelligent temperature control operation, allowing you to enjoy a healthy and comfortable living environment.
