Abstracts

According to our (Global Info Research) latest study, the global Graphene Heavy-duty Anticorrosive Coating market size was valued at US\$ 718 million in 2025 and is forecast to a readjusted size of US\$ 1332 million by 2032 with a CAGR of 9.3% during review period.

Graphene heavy-duty anticorrosion coatings are high-performance industrial anti-corrosion coatings that combine graphene materials as a functional reinforcing component with epoxy resin, polyurethane, acrylic, or other high-solids-content coating systems. This coating utilizes graphene's ultra-high thermal conductivity, high specific surface area, dense barrier structure, and chemical inertness to significantly improve the coating's corrosion resistance, abrasion resistance, impact resistance, and impermeability, while also enhancing the coating's mechanical strength and adhesion.

The upstream of the industry chain mainly includes suppliers of functional materials such as graphene powder, graphene slurry, graphene oxide, and reduced graphene oxide, as well as manufacturers of epoxy resin, polyurethane resin, acrylic resin, curing agents, anti-rust pigments (zinc phosphate, mica iron oxide), titanium dioxide, fillers, and various additives. The midstream consists of graphene heavy-duty anti-corrosion coating manufacturers, who produce graphene epoxy heavy-duty anti-corrosion coatings, graphene polyurethane anti-corrosion coatings, graphene zinc-rich primers, and related intermediate and topcoats through graphene dispersion modification, resin compounding, formulation design, and coating system development. The downstream is mainly used in highly corrosive environments such as marine engineering, shipbuilding, petrochemical storage tanks and pipelines, and bridge steel structures.

In 2025, global sales of graphene heavy-duty anticorrosion coatings reached 75,000 tons, with a production capacity of approximately 120,000 tons, an average selling price of US\$9.3/kg, and an average gross profit margin of 20%-30%.

Upgraded global environmental regulations and carbon reduction policies are key factors driving the development of graphene-based heavy-duty anti-corrosion coatings. Major markets such as Europe, the US, China, and Japan are continuously raising VOC emission standards and encouraging the use of environmentally friendly, high-performance anti-corrosion materials. Simultaneously, the increasing demands for life-cycle management in marine engineering, bridges, and energy facilities are pushing owners to focus more on the lifespan and maintenance costs of anti-corrosion coatings. In recent years, the cost of graphene materials has gradually decreased, and industrial supply capacity has continuously strengthened. Several coating companies have completed demonstration projects, and the industry is transitioning from laboratory research and development to large-scale application.
