## Abstracts

According to our (Global Info Research) latest study, the global Graphene Wafers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Graphene wafers refer to thin slices or substrates made from graphene, a single layer of carbon atoms arranged in a hexagonal lattice structure. These wafers possess exceptional properties, including high electrical conductivity, mechanical strength, and thermal conductivity. They are typically produced through a process called epitaxial growth or transfer techniques to ensure uniform and large-scale production. Graphene wafers find applications in various fields such as electronics, energy storage, sensors, and biomedical devices due to their unique characteristics and potential for revolutionizing multiple industries with their exceptional properties and performance.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
