## Abstracts

MWCNTs are mainly produced using the C-CVD process (catalytic chemical vapor deposition). The evolution of accumulated global production for MWCNTs is shown below. Note here that the commercialization efforts start around 2005/2006. The super hype then sets in, leading to a rush to install capacity. This pushes the industry into a state of overcapacity, and still worse, pushes many to produce a CNT that is not good enough to meaningfully displace carbon black or similar.

Scope of the Report:

CNTs are almost thirty years old already. In this time, they have gone through almost the entire hype curve, rising from their academic origins toward their peak of hype before nearly disappearing into the valley of disillusionment. CNTs have however been making a quiet comeback and have now indeed entered a phase of volume growth.

The global Graphene,2D Materials and Carbon Nanotubes market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
