## Abstracts

The global Graphic Roll Laminator market size is expected to reach \$ 424 million by 2032, rising at a market growth of 2.9% CAGR during the forecast period (2026-2032).

A Graphic Roll Laminator use large rolls of film to laminate documents that are of just about any size, and a number of documents that can be cut or trimmed when finished. Items are placed at the opening on one sheet of plastic (the plastic sheets that are lined with adhesive). There is a roller on top that holds the top layer of laminate in place. As the machine starts, the item is run through and the two sheets of adhesive-lined plastic are heated to the extent that they will adhere permanently together around the document.
