According to our (Global Info Research) latest study, the global Graphite for Sintering market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Isostatically pressed graphite is used throughout the pressure sintering industry to produce graphite molds. The material used to make the sintering mold is selected based on the process temperature and pressure requirements. When the electrical and thermal conductivity of the material are the preferred parameters, it is chosen to reduce the production cycle time. However, when the process pressure is too high, the mechanical strength of the mold takes priority.
