Graphite boat loading and unloading machine is a kind of equipment used in the semiconductor industry in the process of silicon wafer manufacturing and photovoltaic cell production, which is responsible for the automatic loading and unloading of graphite boats and silicon wafers. Graphite boats are containers used to carry silicon wafers for heat treatment processes such as diffusion and oxidation in high temperature environments. They have good high temperature resistance and conductivity. Since the silicon wafer manufacturing process has very high requirements for cleanliness and operating precision, the loading and unloading of graphite boats is usually completed by automated equipment to reduce human contact and improve production efficiency and product quality.
