According to our (Global Info Research) latest study, the global Graphite Insulation Felts market size was valued at USD 452.7 million in 2023 and is forecast to a readjusted size of USD 683.4 million by 2030 with a CAGR of 6.1% during review period.

Graphite Insulation Felts are processed from a rayon precursor and fired to graphitizing temperatures. Primarily used as high temperature insulation in inert or vacuum atmospheres offering high stability through rapid thermal cycling.

Growing Demand from Heat Insulation Segment. The graphite felts are used in high-temperature refractory insulations because of their flexible properties. These felts are primarily used in vacuum and protected atmospheric environments with temperatures reaching approximately C. Carbon and graphite felt are easy to cut and install; they have low densities and thermal masses and low ash and sulfur contents, making them good insulation materials for heat insulation purposes. Global steel production has witnessed significant growth in the past decade, especially in countries like China, India, Japan, and the United States. The World Steel Association predicts that by 2023, there will be a 1.0% increase in global steel demand, bringing it to 1,814.7 million tons. In 2022, there will be 1,796.7 million tons of steel demand. In 2022, global crude steel production reached 1,878.5 million tons; it declined 4.2% as compared to 2021 production. However, it is expected to offer a positive outlook in the near future. So, the market for Graphite Insulation Felt is likely to be led by the heat insulation segment over the next few years.
