According to our (Global Info Research) latest study, the global Graphite Nut market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The graphite nut is a special nut made of graphite material. Different from ordinary metal nuts, graphite nuts use graphite as the main material and have some unique properties and application scenarios.

Features of graphite nuts include: low coefficient of friction, good electrical and thermal conductivity, good corrosion resistance, and high temperature performance. In some high-temperature and high-pressure environments, general metal nuts will fail because they cannot withstand high temperatures and high pressures, while graphite nuts can maintain stable performance in these special environments.
