## Abstracts

The global Graphite Seated Ball Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A graphite seated ball valve is a type of valve that uses graphite as the material for the seat, which is the part of the valve that provides a tight seal. The valve has a ball-shaped disc with a hole in the middle that can be rotated to control the flow of fluid through the valve. The graphite seat provides excellent sealing properties, high temperature resistance, and resistance to chemicals and corrosive substances. This type of valve is commonly used in applications where tight shut-off and reliable sealing are required, such as in the oil and gas industry, chemical plants, and power generation facilities.
