According to our (Global Info Research) latest study, the global Grapples for Excavator market size was valued at USD 478.5 million in 2023 and is forecast to a readjusted size of USD 622.4 million by 2030 with a CAGR of 3.8% during review period.

Grapples for excavators are attachments designed to enhance the versatility and functionality of the machine. They are commonly used for handling and moving various types of materials, such as logs, brush, rocks, demolition debris, and other bulky items.

Excavator grapples consist of two or more arms with gripping tines or claws that securely hold and lift materials. The grapple can be operated hydraulically or mechanically, depending on the specific design. These grapples have a stationary design and are suitable for general-purpose applications. They provide a secure grip on materials but may not offer as much flexibility as other types. A rotating grapple allows the operator to rotate the attachment, providing better control and maneuverability when handling materials. This is particularly useful when loading or dumping materials into specific locations. Hydraulic grapples provide the advantage of precise control and adjustable gripping force. The hydraulic system enables the operator to open and close the grapple as needed, offering versatility for various materials and applications.
