Abstracts

According to our (Global Info Research) latest study, the global Grass Combing Machine market size was valued at US\$ 391 million in 2024 and is forecast to a readjusted size of USD 460 million by 2031 with a CAGR of 2.3% during review period.

The working principle of the grass combing machine is similar to that of a regular grass rake, and its core components mainly include the engine, blades, drum, and collection device. During operation, the engine drives the blades to rotate, sharpening the grass on the lawn and feeding it into the drum. Inside the drum, there are rows of wire brushes that comb the grass tips into neat bundles, which are then sent to a collection device, usually a large garbage bag, for collecting the bundles.
