Abstracts

Rake the ground to remove dead thatch, raise vegetation and level any mole hill. The job is to let the air flow and ventilate the roots, help the soil breathe and improve water penetration. Harrowing should be carried out when the conditions become slightly warm, and it is ideal from March. If the land is raked too wet, it will stir the ground, and if the land is too dry, it may not be raked effectively. The optimum speed is 3 to 4 miles per hour because they were originally designed for use behind horses.
