Grate cooler hammer heads are components used in the grate cooler system of cement plants. The grate cooler is a critical component in the cement manufacturing process, specifically in the clinker cooling stage. It is designed to cool and transport the hot clinker from the rotary kiln to the storage or further processing areas. The grate cooler hammer heads refer to the hammers or hammer-like devices attached to the cooler grate plates. These hammer heads are typically made of durable materials like high-chromium iron or alloy steel due to the abrasive nature of the clinker. They are responsible for breaking up the clinker and aiding in its cooling process as it passes through the cooler.
