## Abstracts

According to our (Global Info Research) latest study, the global Gravimetric Feeder (Loss-in-Weight) market size was valued at USD 470.5 million in 2023 and is forecast to a readjusted size of USD 562.5 million by 2030 with a CAGR of 2.6% during review period.

Loss-in-Weight Feeders generate a controlled, absolutely constant mass flow, as required in mixing processes or extruder infeed.

Loss-in-weight feeders can be used for both small to medium feeding ranges. They work with extreme precision under optimum ambient conditions. They are very flexible and can handle bulk solids, liquids and even poorly flowing products. They are used in many continuous processes such as feeding extruders requiring a high level of short-term feeding consistency. They are also used in the food industry and in laboratories by means of appropriate storage containers and adapted feeding devices. The design varies from compact constructions to modular concepts depending on usage.

As for the Gravimetric Feeder (loss-in-weight) industry, the top 10 manufacturers occupied 26% of production market share.
