Gravity-operated floor drains are floor drainage devices that utilize a gravity-operated opening and closing structure to achieve both drainage and sealing functions. They automatically open during drainage and close under gravity when not in use, effectively preventing odors, insects, backflow, and reducing sewage backflow. They are suitable for residential and commercial drainage applications.

Upstream suppliers mainly include raw materials and components such as stainless steel, brass, engineering plastics, sealing components, and mold processing. Downstream applications include drainage systems in residential bathrooms, kitchens, balconies, laundry rooms, as well as hotels, apartments, commercial buildings, and public facilities.

The global unit price of a gravity-operated floor drain is \$13.60, with annual sales of approximately 28.01 million units. Global annual production capacity is 30-32 million units, and the industry profit margin is 25%.
