Abstracts

The global Grease-Based Thermal Interface Materials market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Grease-based TIMs have a low viscosity, high thermal conductivity, and are an ideal choice for applications where space is limited. This type of TIM is also suitable for instances where controlling thickness and distribution is important. They do not require a cure cycle and are often used in heat sinks and electronic assembly applications. While very conformable, grease-based TIMs require drying time, which may limit the operator's ability to maintain this type of thermal management material over time.

This report studies the global Grease-Based Thermal Interface Materials production, demand, key manufacturers, and key regions.
