## Abstracts

According to our (Global Info Research) latest study, the global Green Aluminium market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Green aluminium cuts energy use in production by up to 90% compared with virgin material. Aluminium recycling is the process by which scrap aluminium can be reused in products after its initial production. The process involves simply re-melting the metal, which is far less expensive and energy-intensive than creating new aluminium through the electrolysis of aluminium oxide (Al<sub>2</sub>O<sub>3</sub>), which must first be mined from bauxite ore and then refined using the Bayer process.
