Abstracts

The global Green Aluminium market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Green aluminium cuts energy use in production by up to 90% compared with virgin material. Aluminium recycling is the process by which scrap aluminium can be reused in products after its initial production. The process involves simply re-melting the metal, which is far less expensive and energy-intensive than creating new aluminium through the electrolysis of aluminium oxide (Al₂O₃), which must first be mined from bauxite ore and then refined using the Bayer process.

This report studies the global Green Aluminium production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Green Aluminium, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of Green Aluminium that contribute to its increasing demand across many markets.
