According to our (Global Info Research) latest study, the global Green Ammonia from Green Hydrogen market size was valued at USD 52 million in 2022 and is forecast to a readjusted size of USD 5606.7 million by 2029 with a CAGR of 95.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Green ammonia is crucial to tackle the existential challenges of producing enough food to feed a growing global population and generating CO₂-free energy. Ammonia (NH₃), a compound of nitrogen and hydrogen, is mainly used to manufacture fertilizers. 80% of the annual global production of over 170 million metric tons is used in this way. And that should become even more in the next few years. But ammonia can also be burnt to make electricity with air and water the only emissions, or used as a storage medium for energy generated from renewable sources.
