According to our (Global Info Research) latest study, the global Green Building Materials market size was valued at USD 210350 million in 2023 and is forecast to a readjusted size of USD 371510 million by 2030 with a CAGR of 8.5% during review period.

In green building materials market, the materials used are recyclable products, which enhance the production environment and quality of life. These materials promote conservation of non-renewable resources and reduce environmental impact associated with fabrication, processing, installation, transportation, disposal, and recycling of building materials. Green building materials are employed in construction industry to address various environment challenges including anomalous climate change, natural resource depletion, atmospheric pollution, contamination of fresh water resources, and loss of biodiversity. Eco-friendly nature, durability, and energy efficiency of green building materials make them ideal for use in designing of residential and non-residential buildings.

Increasing demand for green building materials coupled particularly in emerging economies is expected to have a positive impact towards market growth. In addition, presence of large number of manufacturers is expected to increase the ease in sourcing the products. Oversupply of green building materials is expected to lower product price which is expected drive the market growth over the forecast period.
