According to our (Global Info Research) latest study, the global Green Cement market size was valued at USD 22390 million in 2023 and is forecast to a readjusted size of USD 47640 million by 2030 with a CAGR of 11.4% during review period.

Green cement is considered as a sustainable construction material owing to significant reduction in carbon footprint associated with manufacturing and use of green cement. Green cement is a class of cements comprising varieties of cement that exhibit functional properties which are at par with conventional cement and do not involve adverse impact on the environment. Green concrete manufacturing process is characterized by relatively lower carbon dioxide emissions as compared to ordinary cement manufacturing. Moreover, with the use of green cement, significant reduction in water consumption to the level of about 20% can be effected. Green cement and concrete market is in its emerging stage and is currently limited to developed countries.

According to the Japan Cement Association, Japan's cement industry emitted about 40 million tons of carbon dioxide in 2020. And the cement industry became the fourth largest source of carbon dioxide emissions in the industrial sector after electricity, steel and chemicals. 60% of the cement industry's carbon emissions come from process emissions, 35% from combustion emissions and 5% from indirect emissions from electricity. According to our "Building Materials Research Institute", the global clinker capacity in 2022 was about 3.55 billion tons, and the global cement production was about 4.0 billion tons. According to the National Bureau of Statistics, China's cumulative cement output reached 2.118 billion tons in 2022.
