Abstracts

Green cement is considered as a sustainable construction material owing to significant reduction in carbon footprint associated with manufacturing and use of green cement. Green cement is a class of cements comprising varieties of cement that exhibit functional properties which are at par with conventional cement and do not involve adverse impact on the environment. Green concrete manufacturing process is characterized by relatively lower carbon dioxide emissions as compared to ordinary cement manufacturing. Moreover, with the use of green cement, significant reduction in water consumption to the level of about 20% can be effected. Green cement and concrete market is in its emerging stage and is currently limited to developed countries.

Scope of the Report:

This report focuses on the Green Cement in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes The market based on manufacturers, regions, type and application. The demand for green cement is anticipated to witness a spike due to its own benefits. This type of cement is known for reducing the carbon footprint by about 40-50% during its production process. The main reason for the rising uptake of green cement in growing number of construction activities is the fact that it uses less water. Additionally, it provides excellent thermal insulation and superior fire resistance, which enables structures built with green cement to withstand temperatures up to 2400F. As green cement is known to offer unmatched insulation, it also makes the building resistant to moisture, thereby offering it a good protection against corrosion as well. The Americas will continue to dominate The market by 2020 and is expected to account for more than 38% of the overall market share. The US will be the largest market for

green cement products as stringent regulations regarding GHG emissions will push for extensive demand for such products in construction. Factors such as fast urbanization and industrialization in several developing regions such as Brazil will aid to the growth of The market in the Americas over the next four years.

The worldwide market for Green Cement is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
