The global Green Chemistry and Sustainable Materials market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Green chemical or bio-based chemical substances are chemical substances that are inexhaustible in nature and are delivered from bio-based feedstock. They are less dangerous to the climate than the oil-based formation of chemical substances. Green chemical compounds are shaped fundamentally utilizing crude materials, which utilizes more extraordinary normal assets, safeguarding the natural equilibrium. The fundamental crude materials utilized in delivering green chemical substances incorporate starch, sugar, creature fat, vegetable oils and bio-ethanol.
