Abstracts

According to our (Global Info Research) latest study, the global Green Corrosion Inhibitor market size was valued at US\$ 2010 million in 2025 and is forecast to a readjusted size of US\$ 3770 million by 2032 with a CAGR of 9.4% during review period.

A Green Corrosion Inhibitor is an environmentally benign chemical or bio-based formulation designed to reduce metal corrosion while avoiding the toxicity, persistence, and regulatory burden associated with traditional chromates, nitrites, and heavy-metal salts; these inhibitors typically rely on plant extracts, amino acids, organic acids, biopolymers, phosphate/borate blends, or biodegradable organic films that adsorb onto metal surfaces and form protective molecular barriers in aqueous, oilfield, industrial water, coating, and packaging systems. The supply chain begins upstream with renewable feedstocks (agricultural biomass, fermentation intermediates, natural oils, organic acids) and specialty chemical inputs, which are processed by formulators and specialty chemical manufacturers into inhibitor concentrates or blends; these are then sold through industrial chemical distributors or directly to end-use sectors such as oil & gas, cooling water treatment, metalworking fluids, automotive coatings, construction materials, and marine systems, where they are integrated into fluids, coatings, or surface-treatment processes, driven by tightening environmental regulations and ESG mandates that push downstream users to replace conventional toxic corrosion-control chemistries with sustainable alternatives. In 2025, the global Green Corrosion Inhibitor market produces approximately 620,000 tons against an installed global capacity of about 780,000 tons, with average unit prices ranging from USD 2,800 to 5,500 per ton; this pricing structure supports typical gross margins of around 35%.
