According to our (Global Info Research) latest study, the global Green Diesel market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Green diesel usually refers to biodiesel, also known as biofuel diesel. This diesel is a renewable fuel typically produced from biomass feedstocks such as vegetable oils, animal oils or waste cooking oils. Biodiesel has lower carbon emissions than conventional petroleum diesel because it is derived from renewable resources. The production process of biodiesel usually involves chemical reactions such as esterification or conversion of biomass raw materials into methyl ester to obtain a product similar to traditional diesel. It can be used in conventional diesel engines and requires no additional modifications.
