## Abstracts

The global Green Diesel market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Green diesel usually refers to biodiesel, also known as biofuel diesel. This diesel is a renewable fuel typically produced from biomass feedstocks such as vegetable oils, animal oils or waste cooking oils. Biodiesel has lower carbon emissions than conventional petroleum diesel because it is derived from renewable resources. The production process of biodiesel usually involves chemical reactions such as esterification or conversion of biomass raw materials into methyl ester to obtain a product similar to traditional diesel. It can be used in conventional diesel engines and requires no additional modifications.

This report studies the global Green Diesel production, demand, key manufacturers, and key regions.
