## Abstracts

According to our (Global Info Research) latest study, the global Green Methanol-powered Ship market size was valued at US\$ 336 million in 2025 and is forecast to a readjusted size of US\$ 572 million by 2032 with a CAGR of 6.8% during review period.

In 2025, global Green Methanol-powered Ship approximately 89 units, with an average global market price of around US\$ 3.67 m per unit. Gross margin is about 44%. The cost is 2.06 m usd. The Production is about 200 units. Methanol-fueled ships are vessels that utilize methanol as their primary fuel source for propulsion. Methanol, also known as methyl alcohol, is a clear, colorless liquid that can be produced from natural gas, coal, biomass, or renewable sources like municipal waste.

### 1. Methanol as a transitional mainstream marine fuel

Before ammonia and hydrogen reach full commercialization, methanol?being liquid at ambient conditions and easier to store and retrofit?will become one of the earliest widely adopted low-carbon marine fuels, particularly for container ships and bulk carriers.

### 2. Rapid development of green methanol supply chains

Renewable hydrogen and biomass-based methanol projects are expanding, while ports are building bunkering infrastructure, creating an integrated fuel production-to-ship supply network.

### 3. Adoption of dual-fuel engines and fuel-ready designs

Newbuild vessels will increasingly use methanol dual-fuel engines and maintain conversion flexibility for future fuels, ensuring long-term regulatory compliance.

#### 4. Emission regulations driving adoption

Stricter carbon intensity regulations and potential carbon pricing mechanisms will push shipowners toward green methanol to reduce lifecycle emissions.

#### 5. Standardization and safety framework maturation

Due to methanol's toxicity and low flash point, classification societies and regulators are developing standardized safety, storage, and bunkering procedures, enabling broader deployment.
