Scope of the Report:

This report studies the Green and Recycled Mobile Phone market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Green and Recycled Mobile Phone market by product type and applications/end industries.

Regulatory bodies across the world are compelled to form rules regarding the handling of toxic e-waste due to the increased generation of e-waste. These new standards offer a better command over the practice of e-waste processing and mobile phone recycling techniques. Research analysis on the global green and recycled mobile phone market identifies that the introduction of these stringent regulatory standards will be one of the major factors that will have a positive impact on the market's growth during the coming years. It has been made mandatory to collect the e-waste generated by manufacturers and channelize them for proper disposal and recycling. Manufacturers are compelled to maintain a proper record of the volume of e-waste generated, handled, and disposed of. Furthermore, the application of the hazardous material in electronic equipment has been restricted by the EU legislation. This in turn, will motivate manufacturers to

develop green and recycled mobile phones.

Asia is considered as one of the most common dumping ground for the generated e-waste. The growth in the middle-class population is resulting in an increased e-waste in the region. Also, the purchase volume of electronics is increasing due to the rising disposable income of individuals. The generation of e-waste will further increase due to the short lifespan of these electronic devices. It has been observed that, in APAC, China generates the maximum e-waste. This drives the need for the green phone to minimize the overall environmental impact.
