According to our (Global Info Research) latest study, the global Green and Recycled Mobile Phone market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Green and Recycled Mobile Phone is segmented by Material into Metal-based, Plastic, Others. Recycling or reprocessing cell phones help the environment by saving energy, preserving natural resources, and keeping reusable materials out of landfills, thus dipping pollution. Cell phones comprise a large number of chemicals and hazardous substances used in their manufacturing principally persistent, bio accumulative, and toxic chemicals (PBTs).

Regulatory bodies across the world are compelled to form rules regarding the handling of toxic e-waste due to the increased generation of e-waste. These new standards offer a better command over the practice of e-waste processing and mobile phone recycling techniques. Research analysis on the global green and recycled mobile phone market identifies that the introduction of these stringent regulatory standards will be one of the major factors that will have a positive impact on the market's growth during the coming years. It has been made mandatory to collect the e-waste generated by manufacturers and channelize them for proper disposal and recycling. Manufacturers are compelled to maintain a proper record of the volume of e-waste generated, handled, and disposed of. Furthermore, the application of the hazardous material in electronic equipment has been restricted by the EU legislation. This in turn, will motivate manufacturers to develop green and recycled mobile phones.
