According to our (Global Info Research) latest study, the global Green Preservatives market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Green preservatives refer to environmentally friendly and sustainable alternatives used in various industries, including cosmetics and food, to extend the shelf life of products while minimizing ecological impact. Unlike traditional preservatives that may have environmental and health concerns, green preservatives are often derived from natural sources like plant extracts, essential oils, or bio-based compounds. These alternatives aim to reduce the use of synthetic chemicals, providing effective preservation while meeting the growing consumer demand for eco-conscious and safe products. The development and adoption of green preservatives align with the global movement towards sustainability, promoting a more responsible and environmentally considerate approach to product formulation and preservation.

The industry trend for green preservatives in various sectors, such as cosmetics and food, indicated a rising demand for sustainable and environmentally friendly options. Consumers and regulatory pressures have encouraged a shift towards natural and bio-based preservatives, driven by concerns about the environmental impact and potential health effects of traditional preservatives. Plant-derived compounds, essential oils, and other eco-friendly alternatives were gaining traction. Companies were investing in research and development to create effective green preservatives that meet both regulatory standards and consumer expectations for safer, more sustainable products.
