According to our (Global Info Research) latest study, the global Green Silica Filler market size was valued at USD 504 million in 2022 and is forecast to a readjusted size of USD 893.1 million by 2029 with a CAGR of 8.5% during review period.

Silica is the key-ingredient for fuel-efficient tires, reducing the fuel consumption by up to eight percent compared to conventional passenger car tires. With the sustainable biomass silica a next step will be taken to reduce the carbon footprint of the silica significantly. The silicate, which is the essential raw material to produce the tire silica will be biobased and made with green energy. The demand for sustainable raw materials in tires is increasing significantly. However, until now only very small quantities of biobased silica are available in the market, which do not meet the rising global demand.
