Abstracts

The global Green Silica Filler market size is expected to reach \$ 893.1 million by 2029, rising at a market growth of 8.5% CAGR during the forecast period (2023-2029).

Silica is the key-ingredient for fuel-efficient tires, reducing the fuel consumption by up to eight percent compared to conventional passenger car tires. With the sustainable biomass silica a next step will be taken to reduce the carbon footprint of the silica significantly. The silicate, which is the essential raw material to produce the tire silica will be biobased and made with green energy. The demand for sustainable raw materials in tires is increasing significantly. However, until now only very small quantities of biobased silica are available in the market, which do not meet the rising global demand.

This report studies the global Green Silica Filler production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Green Silica Filler, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
