The global Green Silicon Carbide Micro Powder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Green Silicon Carbide Micro Powder is a silicon carbide product with high thermal conductivity and high strength at high temperatures. It is usually produced by heating silica sand and a carbon source (usually petroleum coke) to high temperatures. The result of this high-temperature process is the crystalline form of silicon carbide particles, which appear in green and black colors. The color difference is due to the purity of the silicon carbide. The purity of green silicon carbide is higher than that of black silicon carbide.
