## Abstracts

According to our (Global Info Research) latest study, the global Greenhouse Shading System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The greenhouse shading system is an important agricultural facility. It mainly uses materials with a certain light transmittance to block part of the excess light, which not only ensures the light required for the normal growth of crops in the greenhouse, but also prevents excess solar radiation from emitting in the greenhouse. Internal accumulation leads to excessive indoor temperature. This can effectively adjust the light and temperature conditions inside the greenhouse and provide a suitable growing environment for crops.
