Abstracts

Grid energy storage is a collection of methods used to store electrical energy on a large scale within an electrical power grid. Electrical energy is stored during times when production (especially from intermittent power plants such as renewable electricity sources such as wind power, tidal power, solar power) exceeds consumption, and returned to the grid when production falls below consumption.

Scope of the Report:

This report focuses on the Grid Scale Energy Storage in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes The market based on manufacturers, regions, type and application. A variety of grid scale energy storage technologies are known to the industry and can be broadly categorized based on the type of energy being stored. Pumped hydro energy storage (PHES) is a well-established energy storage technique; however, because of known challenges, various other energy storage techniques, backed by public and private lending, have surfaced over the last decade. For a market such as energy storage, which is linked to the economy of a country, initiatives related to policy decisions and mass awareness play a key role in the growth. Some countries have introduced reforms / amendments in the policies to encourage The market for energy storage, while others are still debating on it. The White House Summit 2016 is a recent example of such initiatives. At the summit, a range of utility, industry and government storage commitments were highlighted to signify the importance of this subject. Post this, the Federal Energy Regulatory Commission (FERC) started working on re-evaluating some of the policies to encourage energy storage in the US. At the time of release of this study, policies favoring renewable energy over other

sources were in place in about 50 countries. The common theme across these policies is priority dispatch of electricity from renewable sources, special feed-in tariffs, quota obligations for renewable energy and energy tax exemptions. In addition, legal bindings / agreements, such as COP21, to tackle climate change are encouraging the use of renewable energy, which, in turn, is likely to drive the energy storage industry.

The worldwide market for Grid Scale Energy Storage is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
