Abstracts

The global Grille Coupling market size is expected to reach \$ 1337 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

A grating coupling is a mechanical transmission component that connects two shafts through elastic metal grating elements. It possesses excellent vibration damping, buffering, and compensation capabilities for axial, radial, and angular misalignments, making it suitable for medium- to high-torque transmission applications and widely used in industrial power and machinery equipment.

Upstream industries mainly include alloy steel, cast steel, spring steel grating, lubricating grease, and processing materials; downstream applications cover mining machinery, metallurgical equipment, petrochemicals, power generation, fans, pumps, compressors, and general industrial transmission systems. In 2025, the global grating coupling market price was \$337 per unit, with sales of approximately 2.85 million units, a global annual production capacity of 3.2 million units, and an industry profit margin of 30%.

This report studies the global Grille Coupling production, demand, key manufacturers, and key regions.
