According to our (Global Info Research) latest study, the global Grinding Machine With Moving Table market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Grinding machine with moving table is a common grinding machine used in precision machining. It consists of a machine tool, electrical control system, automatic feed system, and other components. This device uses a moving worktable to move the workpiece on the cutter and thus achieve grinding.

Moving table surface grinders can be classified into manual and automatic types. Manual moving table surface grinders require operators to manually control the movement of the worktable for grinding. Automatic moving table surface grinders, on the other hand, can achieve automated control which improves production efficiency and machining accuracy to some extent.

Moving table surface grinders are commonly used for precision grinding of parts, especially those with high requirements for shape and size, such as automobile engine cylinder heads, hubs, guides, and molds.
