The largest manufacturer is Saint-Gobain, with a market share of 15%. The global production sites are mainly located in North America, Europe, China, Japan, Taiwan (China), India, Australia, Southeast Asia, South America, etc. In terms of product material, resinoid bond have the largest market share with 60%, followed by vitrified bond with 35%. In terms of application, the transport industry is the top application area with 38% of the market share, followed by bearings and machinery.

A grinding wheel is a wheel composed of an abrasive compound and used for various grinding (abrasive cutting) and abrasive machining operations. Such wheels are used in grinding machines.

The wheels are generally made from a composite material consisting of coarse-particle aggregate pressed and bonded together by a cementing matrix (called the bond in grinding wheel terminology) to form a solid, circular shape. Various profiles and cross sections are available depending on the intended usage for the wheel. They may also be made from a solid steel or aluminium disc with particles bonded to the surface. Today most grinding wheels are artificial composites made with artificial aggregates, but the history of grinding wheels began with natural composite stones, such as those used for millstones.
