According to our (Global Info Research) latest study, the global Green Sand Casting market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Green Sand Castings are castings made using wet sand or “green sand” molds. The sand is not green in color nor do the molds use “greensand,” a greenish color sandstone. Instead the sand is called “green” because it has moisture in it (like green wood) before the sand dries out when molten metal is poured in the mold.
